4 days later.

- The FBI has **named** the attacker.
- Binance has **reopened withdrawals**.
- And the numbers, for now, **add up**.

Updated 2 November 2026

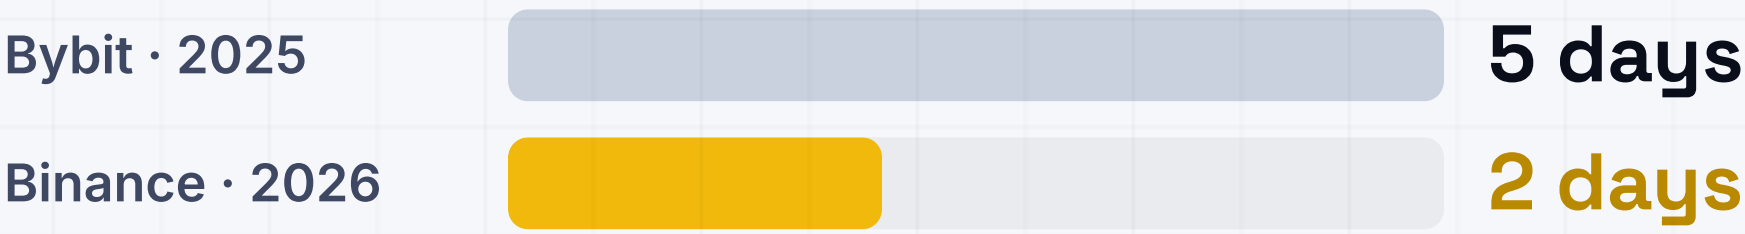

It was North Korea.

FBI · 31 October, 22:36 UTC

Together with the Secret Service and the IRS, the FBI attributed the theft to the North Korean group **“TraderTraitor”** and published the addresses used to launder the funds.

The same playbook as the 2025 Bybit hack. Back then the attribution took 5 days, **this time 2.**

FROM THEFT TO FBI ATTRIBUTION

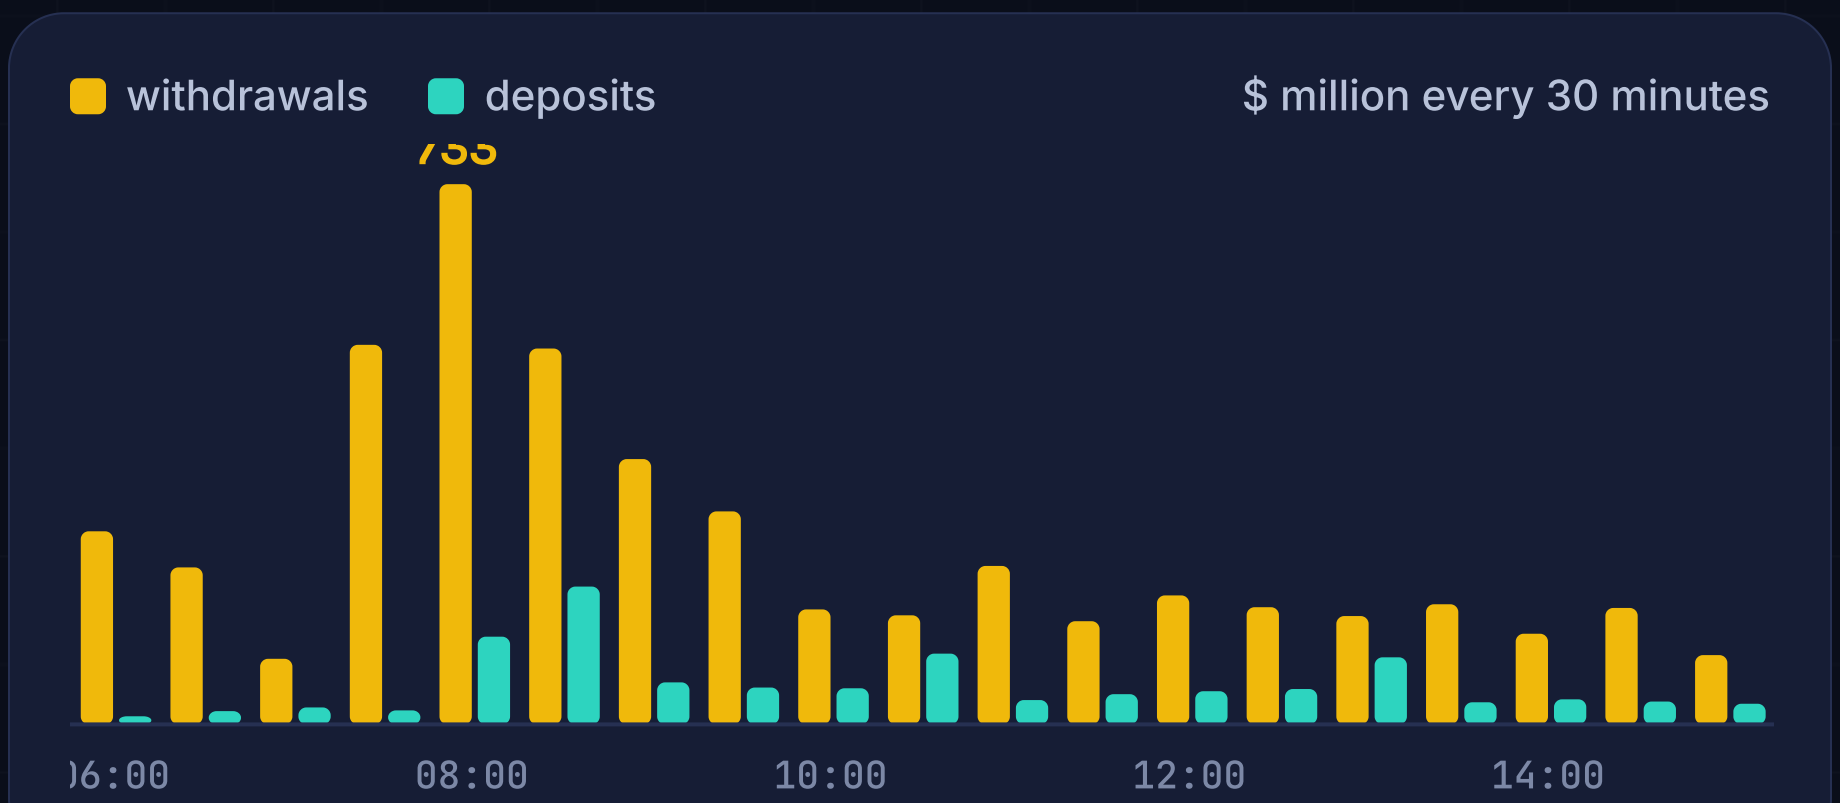

Sources: FBI Cyber Branch on X (31/10), Elliptic.

Withdrawals reopened: $4.6 billion in 9½ hours.

$4.65 bn
out from 06:00 to 15:30 UTC

$1.01 bn
in over the same period

Source: Binance on X, 1/11 at 16:12 UTC (claimed data, redrawn).

A lot? It's 2.1% of what it holds.

After the 08:00 peak, withdrawals slowed down. **So far, no bank run.**

Source: Binance on X, 1/11. Square area proportional to value.

Binance says it has covered 90%.

01 **The emergency fund (SAFU)**
7,499 BTC moved. It will be topped back up to about $1 billion.

02 **The futures insurance fund**
Part of it was used, above the risk threshold, Binance says.

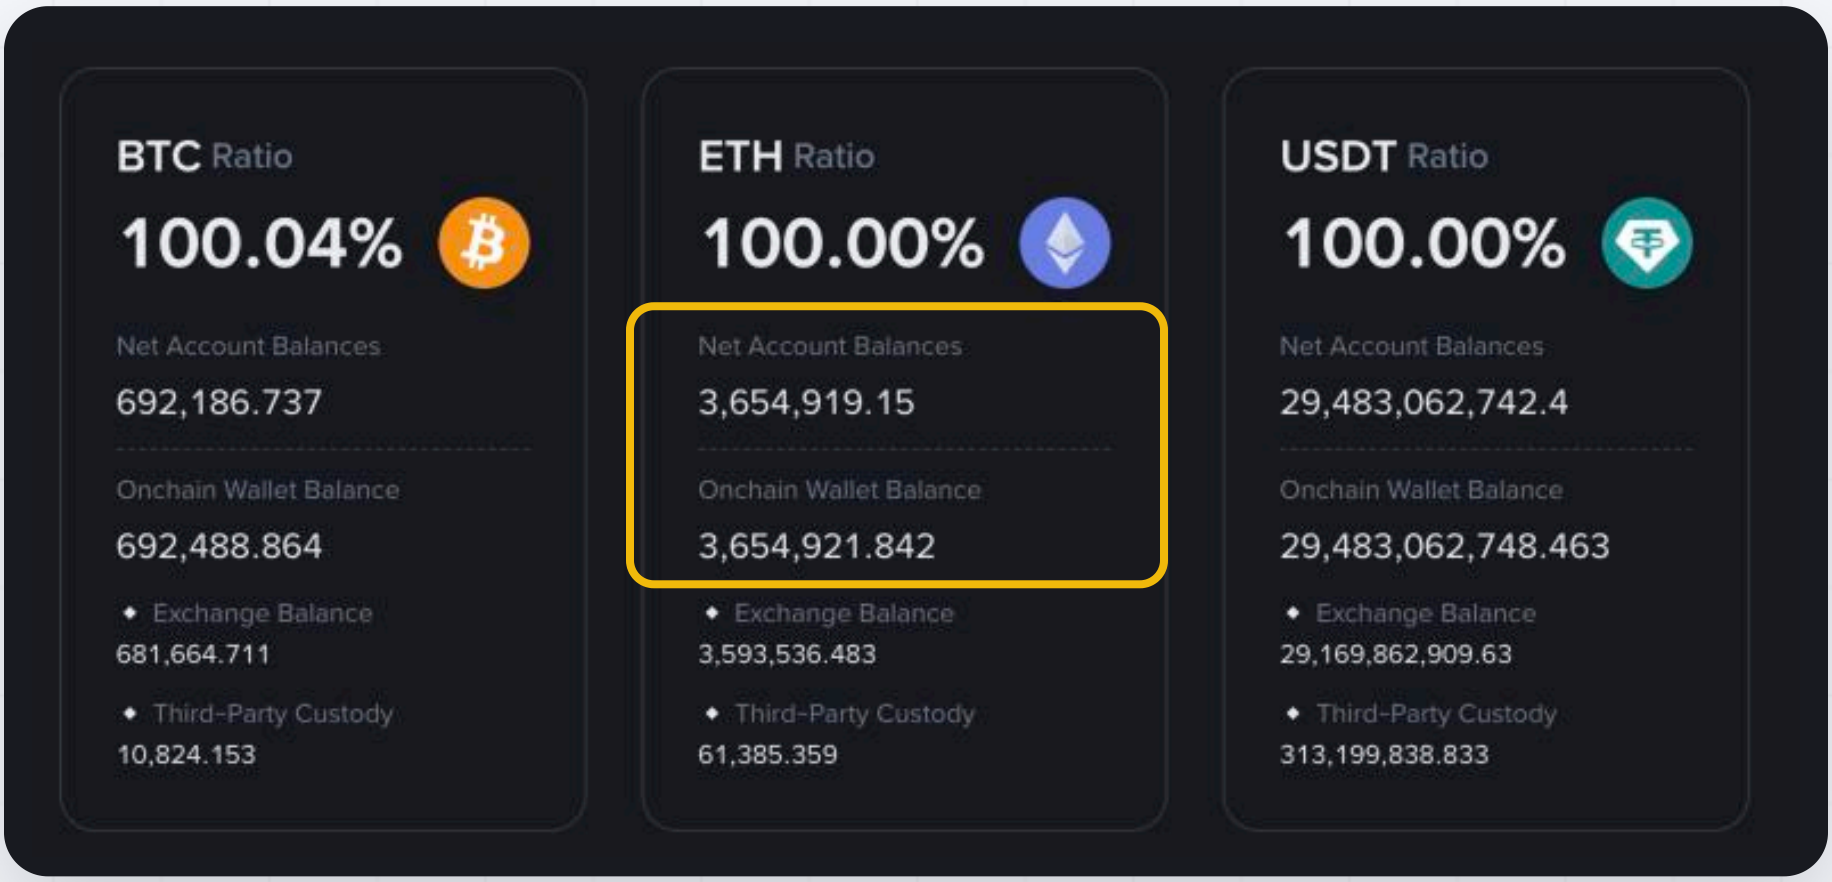

03 **The company’s treasury**
To buy the missing 10%: less liquid tokens, slower to source.

The top 10 cryptocurrencies are already 100% covered.
Binance pays, not its users.

Do the numbers add up? For now, yes.

`Net Account Balances` what Binance **owes its customers**

`Onchain Wallet Balance` what Binance **holds in its wallets**

For ether the two figures differ by **2.7 out of 3.65 million.** One to one, literally.

Source: binance.com/proof-of-reserves, snapshot of 31/10 at 00:00 UTC.

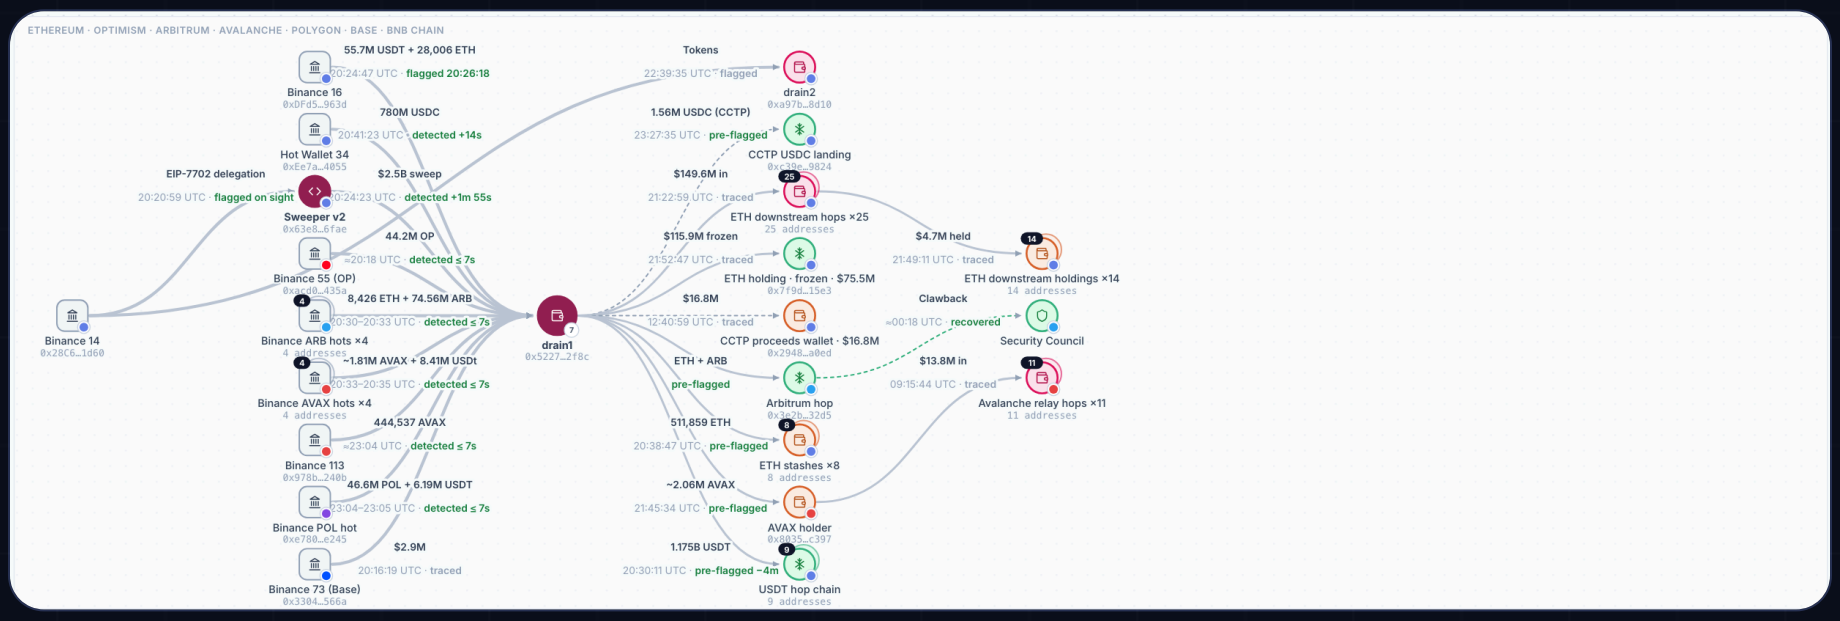

Half a million ETH, sitting still.

≈ $2.7 bn
frozen or recovered

511,859 ETH
still held by the attacker

1,227
addresses on 12 blockchains

607 of 608
FBI-listed addresses never used

Sources: Blockaid, fund tracker (flow map on Ethereum); Zarv on X for the FBI addresses.

What's still missing.

01 **The technical details**

Binance had promised them "within 48 hours": as of 2 November they have not arrived.

02 **Who really signed**

How the attacker obtained valid signatures remains the biggest question.

03 **The full proof of reserves**

The cryptographic verification of the 31 October snapshot.

04 **The post-mortem**

The official account, from start to finish.

The full analysis is updated.

47 slides, with the latest news. Find it in the Featured section of my profile (in Italian).

Updated with the usual patience and some help from Claude.
